Hi Rob,

Here are my latest counts. Anecdotally, there were an estimated 800 "small shorebirds" on Pond 7A on November 3, 2016 and an estimated 1800 "small shorebirds" on Pond 9 on November 3, 2016.

I have redefined "small shorebird" as "could include small *Charadrius* and/or small *Calidris* species". *Charadrius* are plovers and *Calidris* are sandpipers. My earlier definition implied both were always present. Please let me know if this doesn't make sense.

Matt
